

Concise, point-of-care instructions save time and improve outcomes.

Tonsillectomy: Before Your Surgery

What is tonsillectomy?

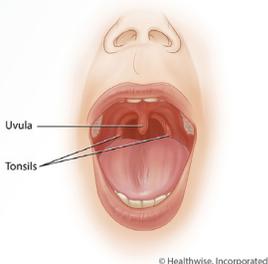

A tonsillectomy is surgery to remove the tonsils. Sometimes the doctor will also take out the adenoids. These are above the tonsils and behind the nose. Your doctor will do the surgery through your mouth. You will be asleep.

Most people go home that same day.

Follow-up care is a key part of your treatment and safety. Be sure to make and go to all appointments, and call your doctor if you are having problems. It's also a good idea to know your test results and keep a list of the medicines you take.

What happens before surgery?

Surgery can be stressful. This information will help you understand what you can expect. And it will help you safely prepare for surgery.

Preparing for surgery

- Understand exactly what surgery is planned, along with the risks, benefits, and other options.
- Tell your doctors ALL the medicines, vitamins, supplements, and herbal remedies you take. Some of these can increase the risk of bleeding or interact with anesthesia.
- If you take blood thinners, such as warfarin (Coumadin), clopidogrel (Plavix), or aspirin, be sure to talk to your doctor. He or she will tell you if you should stop taking these medicines before your surgery. Make sure that you understand exactly what your doctor wants you to do.
- Your doctor will tell you which medicines to take or stop before your surgery. You may need to stop taking certain medicines a week or more before surgery. So talk to your doctor as soon as you can.
- If you have an advance directive, let your doctor know. It may include a living will and a durable power of attorney for health care. Bring a copy to

All of our content is written in **plain language**, so your patients can understand and learn from the education you provide to them.

Every Healthwise Patient Instruction is available in **English and Spanish**, and the 250 most commonly used instructions are offered in 13 additional languages.

Engage patients with evidence-based information

the hospital. If you don't have one, you may want to prepare one. It lets your doctor and loved ones know your health care wishes. Doctors advise that everyone prepare these papers before any type of surgery or procedure.

What happens on the day of surgery?

- Follow the instructions exactly about when to stop eating and drinking. If you don't, your surgery may be canceled. If your doctor told you to take your medicines on the day of surgery, take them with only a sip of water.
- Take a bath or shower before you come in for your surgery. Do not apply lotions, perfumes, deodorants, or nail polish.
- Take off all jewelry and piercings. And take out contact lenses, if you wear them.

At the hospital or surgery center

- Bring a picture ID.
- The area for surgery is often marked to make sure there are no errors.
- You will be kept comfortable and safe by your anesthesia provider. The anesthesia may make you sleep. Or it may just numb the area being worked on.
- The surgery will take less than an hour.
